

# Website Design Phases

## Phase 1 - Design of Website Skin

- Designers get the Design Brief from the client
- Designers design the Website Skin (Look and Feel)
- Example of how the Website will look is given in a static Jpeg format to client
- Client can do revisions concerning colour, placement of buttons etc.
- If the client is satisfied with the Website skin - Sign off is required before continuing to Phase 2

## Phase 1 - Implementation of Design

- Web Developer get's the Website Skin (Look and Feel) from the designers
- Web Developer develops the Website according to the signed off sample
- Web Developer develops the Website on the Jabulani Test Server
- Web Developer sends a link to the client for the client to check the implementation of the design
- If the client is satisfied with the Website implementation - Sign off is required before continuing to Phase 3

## Phase 3 - Testing

- Web Developer populates the website on the Jabulani Test Server with content given by the client (text and pictures)
- When all of the content has been added the Web Developer will send the client a link to test the site while it is on our server.
- Any changes that needs to be done get's done now
- If the client is satisfied with the Website implementation - **Sign off** is required before continuing to Phase 4

## Phase 4 - Going Live

- After the client has checked everything and is 100% satisfied he will Sign off the website
- The Web Developer will then move the files from the Jabulani Test Server to the Live Domain
